SOCaaP Sensor is a monitoring tool that listens to network traffic and provides additional visibility for SOCaaP over network activity.

- SOCaaP Sensor is used to communicate *network* information to SOCaaP. Endpoint monitoring is carried out by installing Nxlog and Rsyslog (as described in this guide)
- Customers who wish to add network monitoring in addition to endpoint monitoring should setup SOCaaP Sensor

Open the 'SIEM' interface

- Login to ITarian
- Click 'Applications' > 'SOCaaP'
- Click 'SOCaaP' -> 'SIEM'

We have prepared this wiki to help customers overcome "Session Expired" warning on SOCaaP section while using Google Chrome browser.
