Open CCS > Click 'Advanced Tasks' > 'Create Rescue Disk'

- Comodo Rescue Disk (CRD) is a bootable disk image that lets you run virus scans in a pre-boot environment (before Windows loads).

- CRD runs Comodo Cleaning Essentials on a lightweight distribution of Linux.

- The application is a powerful virus, spyware and root-kit cleaner which works in both GUI and text mode.

    - CRD can eliminate infections that are preventing Windows from booting in the first place.

    - It is useful for removing malware which has embedded itself so deeply that regular AV software cannot remove it.

    - CRD contains tools to explore files in your hard drive, take screen-shots and browse web pages.
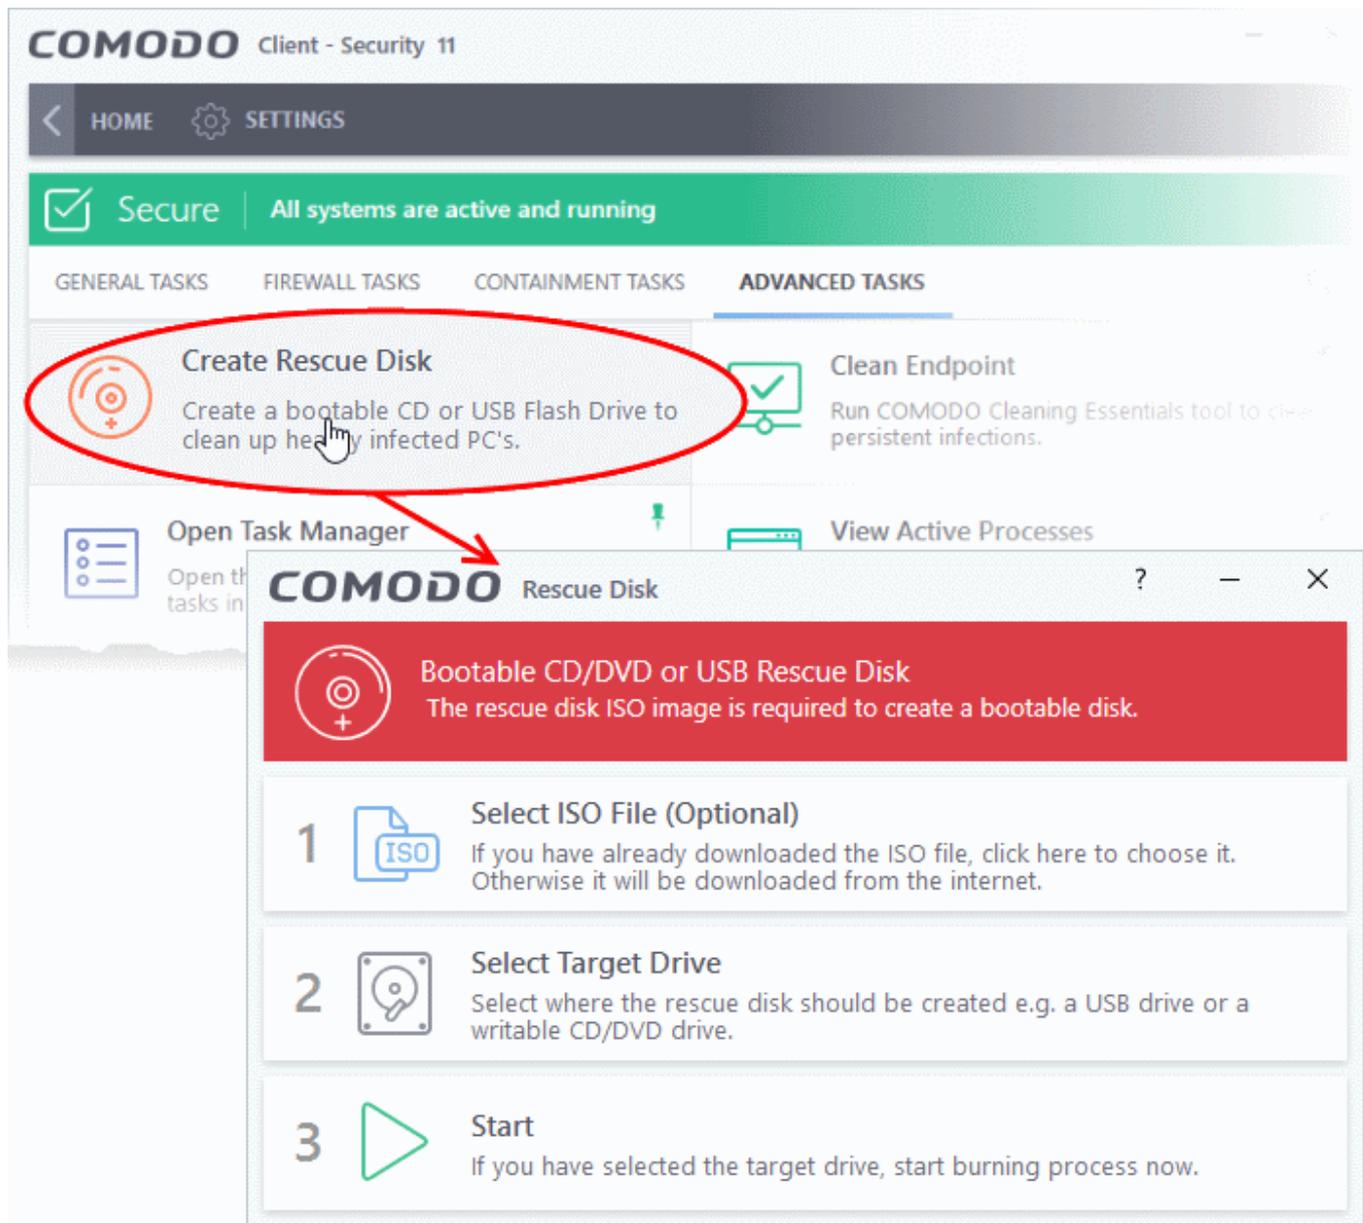

The disk is available in .iso format and can be burned to CD, DVD or USB.

Create a rescue disk

- Login to the endpoint and open CCS. You can open CCS by double-clicking the system tray icon:

- Click 'Advanced Tasks' > 'Create Rescue Disk'

The setup screen shows the steps to create a new rescue disk:

Step 1 - Select the ISO file (optional)

- Only click step 1 if you have already downloaded the rescue disk ISO from Comodo. Step 1 allows you to select the file.

- If not, please ignore step 1. The .iso will be automatically downloaded in Step 3 anyway.

- You can download the .iso, if required, from
 http://download.comodo.com/crd/download/setups/comodo_rescue_disk_2.0.261647.1.iso

Step 2 - Select target drive

- Choose the CD/DVD or USB on which you want to burn the rescue disk. You will boot to this disk to run the virus scanner.
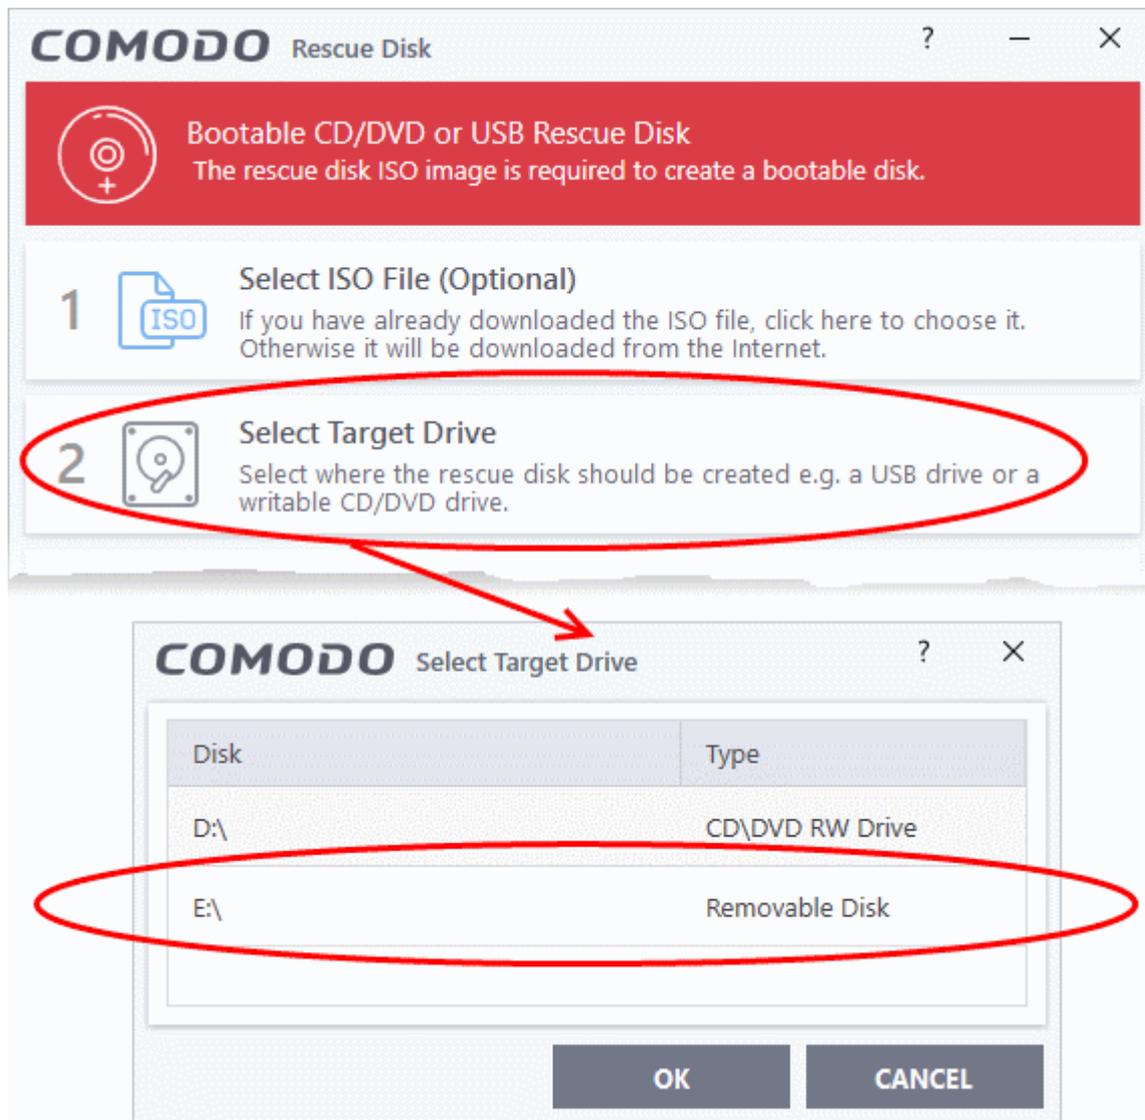

Burn to CD or DVD

- Label a blank CD or a DVD as "Comodo Rescue Disk - Bootable" and load it in your CD/DVD drive.

- Click 'Select Target Drive' then choose the drive in the 'Select Target Drive' dialog
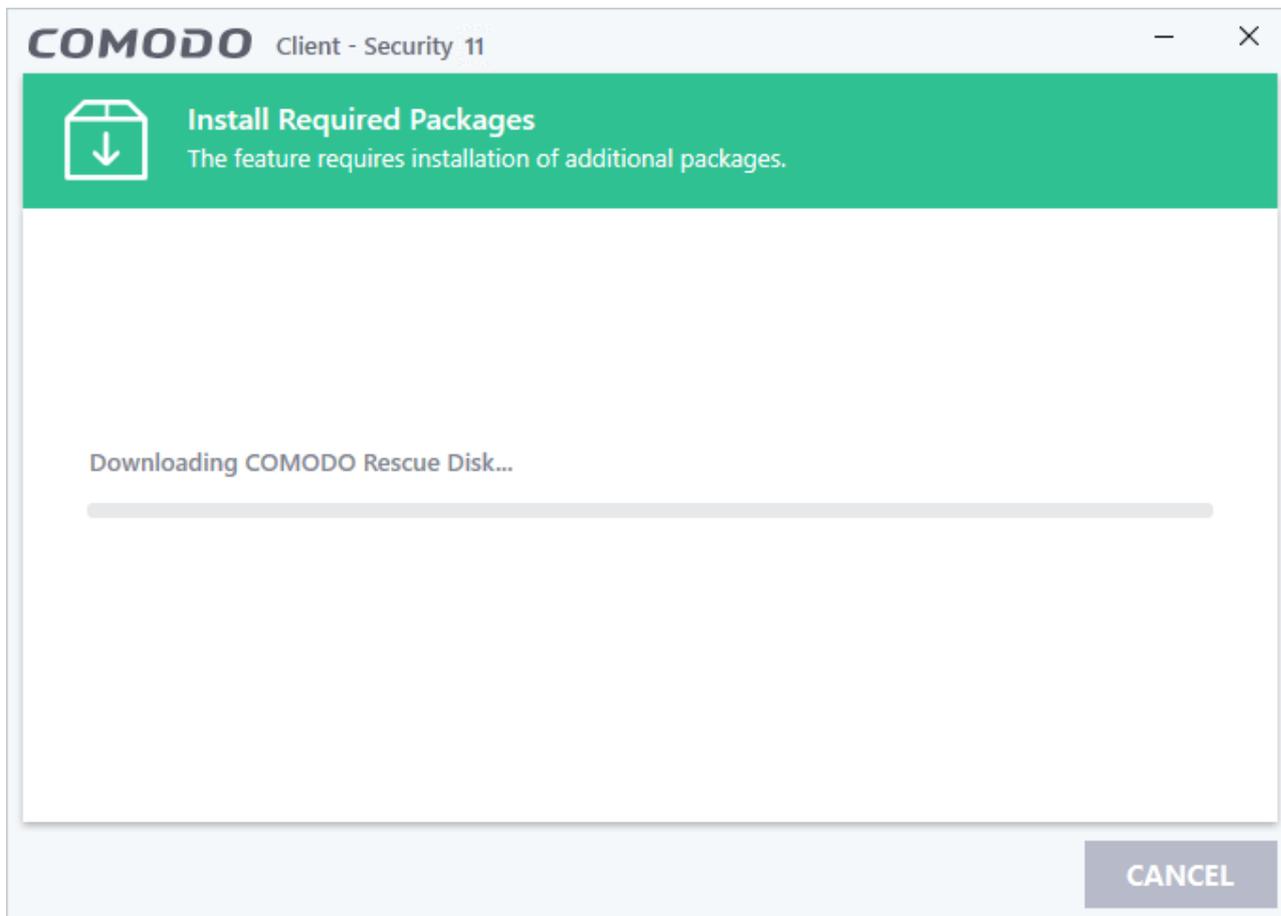

- Click 'OK'

Burn to a USB drive

- Insert a formatted USB stick in a free USB port on your computer

- Click 'Select Target Drive' in the 'Rescue Disk' dialog

- Select the drive from the 'Select Target Drive' dialog and click 'OK'
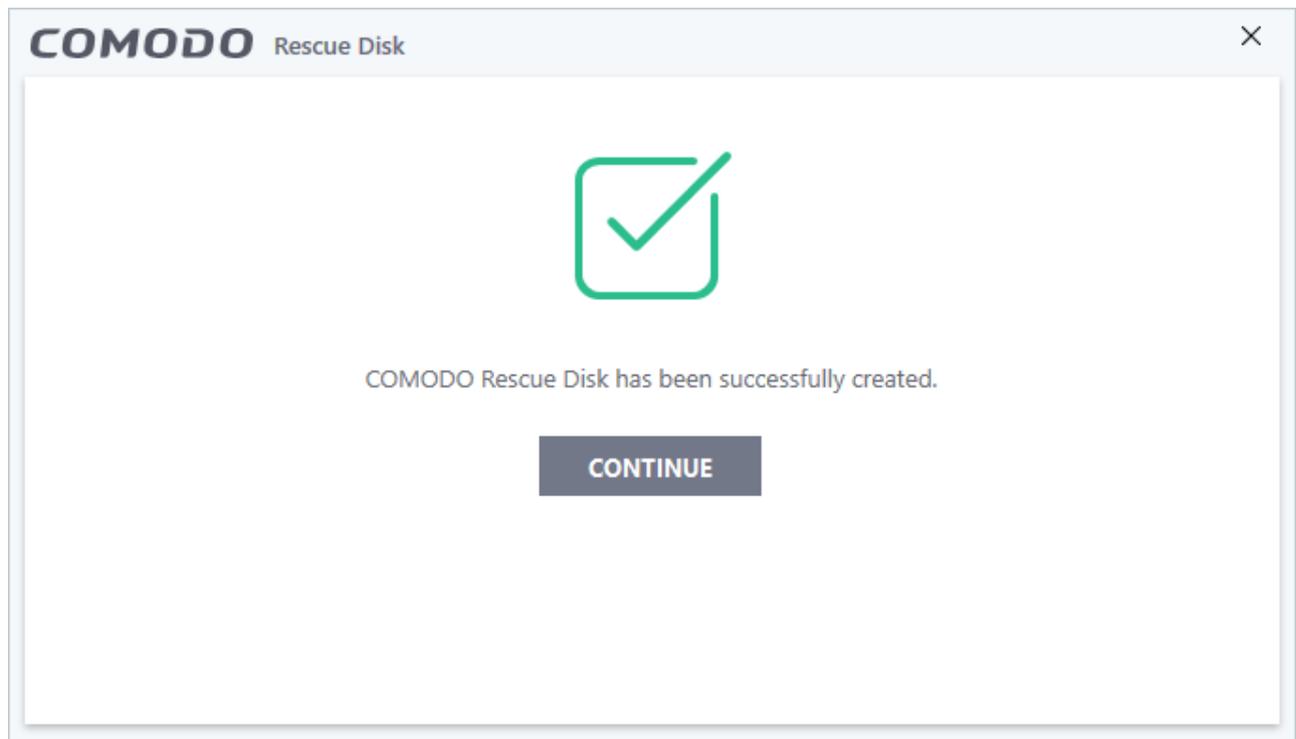

Step 3 – Burn the Rescue Disk

- Click 'Start'

- If you selected a local ISO in step 1 then burning will start immediately. If not, the ISO will be downloaded from Comodo servers:

After downloading, setup will burn the ISO to your target drive:

- Wait until the writing process is complete. Do not eject the CD/DVD/USB drive early. The CD/DVD/USB will be ejected automatically when the process is finished.

Your bootable Comodo Rescue Disk is ready.

- Click 'Continue' to go back to the CIS interface.

You can now boot your system using the rescue disk. This will run the scanner in your pre-boot environment.
