- ITarian Remote Access software is a peer-to-peer communication tool that uses the secure RTP protocol to remotely connect to managed endpoints. The tool uses standard technologies and protocols so no additional software or hardware is necessary.
- ITarian is ideal for anybody that needs to regularly take control of remote endpoints to run maintenance or troubleshoot issues. Typical users include managed service providers, IT admins, customer support teams and even home users.
- This short tutorial explains how to download and install the ITarian Remote Access tool.

In brief:

- Visit remoteaccess.itarian.com
- Click the 'Get Now for Free' button
- Enter your email ID > click 'Get Free Now'
- Run the setup file on your local machine
- Click 'Launch' after installation

Add the remote endpoints that you want to connect to

Process in detail:

- Visit remoteaccess.itarian.com
- Click 'Get Now for Free' at top-right
