

SOCaaP Sensor is a monitoring tool that listens to network traffic and provides additional visibility for SOCaaP over network activity.

- SOCaaP Sensor is used to communicate *network* information to SOCaaP. Endpoint monitoring is carried out by installing Nxlog and Rsyslog (as described in this guide)
- Customers who wish to add network monitoring in addition to endpoint monitoring should setup SOCaaP Sensor

Open the 'SIEM' interface

- Login to ITarian
- Click 'Applications' > 'SOCaaP'
- Click 'SOCaaP' -> 'SIEM'

We have prepared this wiki to help customers overcome "Session Expired" warning on SOCaaP section while using Google Chrome browser.

When you see this warning, go to **chrome://flags** address then disable the following flags which are defaultly enabled

SameSite by default cookies = Disabled

Enable removing SameSite=None cookies = Disabled

Cookies without SameSite must be secure = Disabled

The screenshot shows the Chrome Experiments page at chrome://flags. Three experimental flags are highlighted with a red box and set to 'Disabled':

- SameSite by default cookies**: Disabled. Description: Treat cookies that don't specify a SameSite attribute as if they were SameSite=Lax. Sites must specify SameSite=None in order to enable third-party usage. #same-site-by-default-cookies
- Enable removing SameSite=None cookies**: Disabled. Description: Enables UI on chrome://settings/siteData to remove all third-party cookies and site data. #enable-removing-all-third-party-cookies
- Cookies without SameSite must be secure**: Disabled. Description: If enabled, cookies without SameSite restrictions must also be Secure. #cookies-without-same-site-must-be-secure

Other flags shown include 'Temporarily unexpire M86 flags' and 'Temporarily unexpire M87 flags', both set to 'Default'. A red arrow points to the 'Relaunch' button at the bottom right.

Then **Relaunch the Chrome Browser** to make the changes effective

Now you can see that warning has been resolved after disabling the flags.

The screenshot shows the Tarian MDR dashboard. The top navigation bar includes 'APPLICATIONS', 'MANAGEMENT', 'REPORTS', 'STORE', and 'TOOLS'. The user is logged in as 'ilgtestsocaap7@yopmail.com'. The dashboard is titled 'Situational Awareness' and features a left sidebar with 'Customers' and 'Log Collection' tabs. The main content area displays four charts: 'Logs per Minute', 'Logs per Collector', 'Top Applications', and 'Top Products', all showing 'No data available'. A red warning icon in the top right corner indicates a resolved issue.
