

- The 'Patch Management' area lets you install and manage updates to operating system and 3rd party applications on Windows devices.
- You can also roll Windows back to an earlier version by removing updates that have may have caused issues.
- You can remove updates from all devices in your network, or from individual devices.

Uninstall Windows updates from ALL devices

- Login to ITarian portal
- Click 'Applications' > 'Endpoint Manager'
- Click 'Applications' > 'Patch Management'
- Click the 'Operating System' tab if it is not already open
- Identify and select all patches that you want to remove
 - Tip - click the funnel icon on the right to search for and filter patches
 - Tip - click the number in the 'Installed' column to view all endpoints on which a patch is installed
- Click the 'Uninstall Patches' button:

- Click 'OK' to confirm the removal

- The uninstall command is immediately sent to all endpoints. The endpoints may require a restart to complete the removal.

Uninstall Windows updates from INDIVIDUAL devices

- Login to ITarian portal
- Click 'Applications' > 'Endpoint Manager'
- Click 'Devices' > 'Device List'
- Click on the name of the Windows device from which you want to remove updates

- Tip - click the funnel icon on the right and select 'Windows' to view only Windows devices. The filter menu also lets you search for specific machines
- Click the 'Patch Management' tab in the device details page
- You will see a list of all available Windows updates
- Select the updates you wish to remove
 - Tip – Again, you can use the filter icon on the right to search for specific patches
- Click the 'Uninstall Patches' button:

The screenshot shows the 'Patch Management' interface for device 'DESKTOP-ELU2ID9'. The 'Uninstall Patch(es)' button is highlighted with a red box. Below it, a table lists installed updates:
