

- The security dashboard is a list of all security events on managed Windows endpoints. An event is created when a security module takes an action on a file. For example, the antivirus module blocks a suspicious file, or the containment module runs an unknown file in the container.
- The dashboard lets you view events by event date, by file name, or by device. You can also view a Valkyrie report on the file featured in the event.
- Valkyrie is a file analysis service that tests files with a range of static and behavioral checks. The service helps Comodo establish whether an unknown file is malicious or safe.
- This article explains how to view Valkyrie reports on files which created a security event.

Open the security dashboard

- Open Endpoint Manager
- Click 'Security Sub-Systems' > 'Security Dashboards'
- You can view events by event time, by file name, or by device:

The screenshot shows the security dashboard interface. At the top, there are tabs for 'Event View', 'File View', and 'Device View'. Below these are several action buttons: 'Action on Endpoint', 'Change Rating', 'File Details', 'Download Valkyrie Report', 'Check Valkyrie Details' (circled in red), and 'Export'. A search bar for 'file HASH' is present. Below the search bar is a table of events with columns: DATE TIME, COMPONENTS, ACTION, OS, DEVICE NAME, FILE NAME, FILE PATH, FILE HASH, INITIAL COMODO RATING, and CURRENT COMODO RATING. One event is selected, and its details are shown in a red-bordered panel. The panel has a 'VALKYRIE' header and a 'DASHBOARD' menu. The main content area shows a 'Summary' tab with a large green checkmark and the text 'CLEAN Valkyrie Final Verdict'. To the right, there is a detailed analysis report for the file '2018-11-20 14:05:51.339019'. The report includes file type, SHA1, MD5, first seen date, number of clients seen, last analysis date, and human expert analysis result.
